# GAME OVERVIEW

---

*Dinosaur Cowboys is a fast playing (30-60 minutes) skirmish game of competing Poses composed of up to 5 members and 1 dinosaur. Each character in the posse can be customized to fulfill a different role and purchase weapons and equipment from the many options available. Combat takes place in the futuristic landscape of the year 2285, where a supervolcano erupted and changed the course of mankind forever.*

The way you set up and play Dinosaur Cowboys will be familiar to anyone who has experienced other tabletop skirmish, roleplaying or war games.

Each player takes on the role of leading a Posse of characters (such as a sly gunslinger, a rich noble explorer, an old weary lawman, etc.) and immerses themselves in the futuristic world outlined below. Players can battle head to head in standalone skirmishes, or link their fights into an ongoing campaign woven with narrative, travel, exploration, purchases, and more. Although not strictly necessary, an extra player who oversees the campaign (called the Sheriff or Game Master) is recommended. The Sheriff's role is rule arbitration, map set up, controlling any unaligned enemies, moving the storyline along, and shaping the world to react to the player's actions.

Dinosaur Cowboys is played using 28mm figurines to represent characters and dinosaurs, but other scales work just as well. These figurines will move and fight across tabletop terrain using the rules below. The actual pieces of terrain can range from high quality styrofoam plots of land and handcrafted trees to a simple cloth mat spread over stacks of books to make bumpy hills.

As a Posse advances through the world they will grow in ability and be able to surmount new, exciting challenges. The first task a Sheriff presents to a fresh Posse in a campaign may be as simple as stealing dinosaur eggs. Then months later (either in game time or real world time) the characters can be founding (or conquering) towns, forging new frontiers and shaping the fate of the entire country.

## What is Needed to Play

To play a game of Dinosaur Cowboys a few common hobby items are needed:

- 30-60 minutes of time (more terrain or larger, stronger posses will increase playtime)
- This rulebook and one Posse Roster per player
- Pencils and erasers
- Measuring tape or stick
- A flat surface to play on with representations of terrain
- 28mm character figurines or miniatures
- Multiple 12 sided dice (referred to as D12s)
- A few 6 sided dice (referred to as D6s)
- One of each 4 sided die (D4), 8 sided die (D8), and 10 sided die (D10)
  - If these dice are unavailable you can substitute D12s through re-rolls or compressing a range of numbers
- Token markers for Moved, Acted, Fleeing, Panic, Reload, Stunned, Slowed, Stopped
  - These can be simple scraps of paper, colored beads, discs of wood, or custom made plastic tokens

# HISTORY

---

## Prehistoric Chamber

In the savage time when dinosaurs ruled the Earth, roiling volcanoes rapidly changed the landscape with stunning ferocity. The thick forests and grasslands of what would eventually become Wyoming were home to such a volcano. Scalding magma thundered through underground chasms of solid rock, venting boiling steam to the surface through numerous geysers.

The intensity of the volcano had increased and increased until finally the lava broke through the crust in an unmatched eruption. An expansive magma chamber below the surface was emptied as the fiery liquid engulfed trees and dinosaurs with equal hunger.

Normally the roof of such hollows would collapse inwards, forming a caldera, as magma was no longer available to hold up the thick layer of dirt. By chance, the hearty rock failed to crack or tumble, resulting in a vast, scorched chamber.

Hundreds of miles wide, the room unexpectedly provided sanctuary and shelter for weaker dinosaurs that wandered inside. Soon larger, cunning predators innately tracked and followed their prey into the chamber. The desperate battle for survival continued unabated beneath the surface.

Smaller beasts ferried seeds and plant life into the cave, using the nooks and crannies of the rock as their own personal cellar. Sunlight pierced the darkness through porous roof, providing nourishing energy to the growing vegetation below.

In time, the shifting Earth brought a new flow of unyielding lava, but the burning sea passed above the chamber, warming and cooling with the passing of seasons. Unharmed, but trapped by hardened rock, life tenaciously continued in the enclosed ecosystem for millions of years.

Dirt and silt blew across the solidifying magma, eventually forming a new layer of soil above the chamber. In time sweeping forests would regrow and the venting volcano would be named Yellowstone National Park by the humans that came after. The millions of tourists eagerly watching the erupting Old Faithful geyser had no idea of the prehistoric time capsule buried beneath the surface.

## Eruption Day

On a quiet, spring day in the year 2037, the aggravated supervolcano erupted again. Scientists used their last seconds alive to futilely throw their hands up in surprise and scoff before lava poured over the surrounding buildings. As before, magma was agitated to the surface, flooding the entire park in unrelenting heat.

The supervolcano tore asunder the chamber roof, cracking stone that had long held the lava at bay. Great clouds of dusts were thrown into the air, and titanic amounts of stored gas eagerly escaped from the chamber.

Long caged in the hollow the gases gleefully mingled with the carbon dioxide in the atmosphere, corroding and damaging the ozone layer. The result was exponential amplification of the greenhouse effect, heating the entire Earth with increased solar rays.

As the expended lava again cooled and hardened, new pathways were opened to release the dinosaurs. Swarming across the land in great herds, the hungry creatures eagerly searched for new pasture and new hiding places from carnivores.

Calm after years of war, the United States of America had no strategy and no escape plan to stem Nature's wrath. Increasing temperatures caused polar ice caps to melt and raise the water level of the Earth's oceans, resulting in coastal swathes of land being drowned.

The eastern coast was hit the hardest as every city and carefully paved road were washed away. Bustling Time Square in New York became a floundering pool of rusted buildings populated by darting schools of fish.

On the western coast San Francisco and Los Angeles dissolved into distant memories. Millions of people were killed as the great cities were flooded and lowered to the floor of the widened ocean. Eventually the chaotic tide slowed and broke at the Mississippi river, leaving numerous prairie towns with a new ocean view.

As expected the populace panicked. A massive migration began away from the volcanic remnants of Wyoming and the reformed coasts. The southern deserts became unbearable wastelands with temperatures soaring to water's boiling point.

Canada to the north was covered in ash and eventually emptied as unprepared citizens escaped the cold by fleeing south. The country remains forsaken and abandoned, covered in blowing snow and choking ash and ruled by dangerous creatures. Rumors persist that Alaska endures untouched by the eruption's devastation; a veritable paradise for those brave enough to explore northwards.

After the chaos the darkest years of humanity's existence followed. Scavengers and savages ruled the cities as communications and technology broke down. Electricity was scarce and food even scarcer. Horrible acts of violence and torture filled every street and town in an all-consuming apocalyptic whirlwind.

Mankind was on the brink of extinction.

### **First Contact**

Fifty two years after the eruption, a caravan of explorers driving crude electric vehicles from Reno in Nevada to Fargo in North Dakota made a startling discovery. The previously desolate, blackened rocks around the volcano had become a lush jungle.

Baffled by the find, the group continued to explore the strange, unrecognizable plant life. Unlike the sandy deserts that consumed the rest of the continent, the temperatures inside the jungle were comfortably warm; almost tropical. Veins of rich metal had been exposed by the turmoil, and the endless tangle provided rich lumber resources.

Their excitement became terror as a hulking Tyrannosaurus Rex chased and devoured three of the crew. The rest fled, wild with fear and confusion. They stopped at the first safe town they came across, called Alliance, Nebraska. Dismissed as men gone mad from the sun, the retelling of

the story of a veritable paradise did little to rouse the attention they had hoped.

However, eventually the rumors travelled. Soon numerous big game hunters, adventurers, and entrepreneurs flocked to the jungle.

### **Reconstruction Begins**

Two years later a brave young scientist named Doctor Emilee Viator gathered a crew of experienced trackers, industrious farmers, and brave warriors. Calling themselves the Neotechnoists, the historic party of thirty created the first permanent settlement in the jungle, near the old world town of Cody, Wyoming.

Built high in the trees and protected by organized sentries, the town was designated Haven. Nestled in the home territory of the dinosaurs meant Dr. Viator achieved stunning progress of the study and understanding of the ancient creatures.

Soon settlers converged on Haven, eagerly leaving the unforgiving deserts for a chance at a new life in the jungle. With renewed help and a resolute vision of the future, Emilee began expanding her town and molding the jungle to suit the needs of mankind.

### **The Wall**

By 2129 Haven was the capital of a fledgling empire. Half the remaining population of the United States called the jungle their home, while the stubborn other half refused to leave their dusty shelters in the wide open plains surrounding the location.

Incentive programs were created, and soon even the staunchest of desert dwellers immigrated to the expanding cities and steel homes of the jungle. The populace of the growing empire took the name of their founders, and so the Neotechnoist civilization was born.

By harnessing the raw power of dinosaurs in the place of dwindling crude oil, gleaming spires and reinforced bunkers soon stretched across the entire jungle. The jungle and associated tropical climate had also expanded, overrunning all of Wyoming plus the neighbor states of Idaho, Montana, and pieces of their outside borders.

It seemed mankind had restored itself to the glories of modern living. Some dinosaurs fled the intrusive encroachment; their primordial instincts no match for the relentless march of humans. United under a single banner, the seventeen million Neotechnoists began constructing their largest project to date. Harvesting chunks of lava rock from thousands of quarries, an imposing wall was erected to circle the jungle. This succeeded in protecting the populace from roaming feral beasts.

The Wall was fifty feet high and five feet thick, with heavy metal gates blocking all the roads leading out from the jungle. But a barricade works both for and against those it surrounds, and soon the people forgot their desert upbringing; forgot everything but the Neotechnoist way.

### **Discontent Rumbings**

The upper class nobles of Haven soon grew bored by the tedious routine of peace. Having being raised to treat dinosaurs like simple cattle, a new generation of youth were enamored and mystified by the untamed wild lands outside The Wall.

In 2203, the first of the rebellious young fired their grappling hooks over the top of The Wall, and snuck away into the desert. Much like the first explorers of the jungles, the group brought back tall tales of untold riches and exciting dangers that enticed some of the weary, apathetic Neotechnoist population.

Soon it was not just rich nobles going Over The Wall, but the downtrodden peasants and oppressed working class. Exploited and helpless, the lower class were eager for a chance at a new

life. Whispers of free, unclaimed land as far as the eye could see drew pioneers to depart into the forgotten deserts.

Angry at the loss of their servants, the ruling lords of Haven outlawed leaving the jungle. But the strict penalties and harsh sentences just increased the forbidden lure of the desert. By 2218, close to one-third of the population had abandoned the Neotechnoist way to live free and unhindered in the dangerous desert.

### **A Movement is Born**

Those that grappled and trained wild dinosaurs, built rickety towns of wood and sweat, and enjoyed the riches of their labors became unrecognizable as Neotechnoists. The unorganized bands and roaming gangs began calling themselves Dusters. Soon the nomenclature had even slipped into the speech of the jungle people.

To the Neotechnoists these scraps of humanity were considered primitive and rough. In return the Dusters called the jungle people Volkies (for their proximity to the volcano), or Veggies (for the strict vegetarian diet Neotechnoists indulged in).

The population that had permanently remained outside The Wall amidst the chaos and danger clashed with the Dusters. Wild and brutal by any standards, these Savages were in turn looked up by the Dusters much as the Neotechnoists looked upon them.

The lonely, dusty towns outside The Wall resembled something from an old wild west movie. A rustic frontier attitude emerged thanks to the mass of explorers and settlers. Embracing the romantic imagery of a distant past, the Dusters began dressing like cowboys and outlaws of nearly 400 years earlier. Wrangling dinosaurs for transportation, food, and protection, the new cowboys began to slowly rebuild a different world than the Neotechnoists.

### **Present Day**

The year is 2285, and the first generation of Dusters are beginning to succumb to old age. Never experiencing a time before they lived in the desert, the next generation continue their simple, dangerous lives. Safely inside The Wall the civilized Neotechnoists also maintain their advanced, controlled lifestyles. Meanwhile the Savages remain a constant, dangerous threat to anyone.

Humanity and dinosaurs have assimilated and recovered their strength and dominion. However the Dusters and Neotechnoists look towards an uncertain future, split by class, distance, customs and traditions.

# MISCELLANEOUS

---

## Game Terms

Throughout this rulebook certain specific terminology will be used, the definitions of which follow:

**Character, Person, Human:** Leaders and Members of Posses, these terms refer to human entities.

**Dinosaur:** Represented by larger figurines, refers to anything that uses the Dinosaur rules.

**Entity:** A Character or Dinosaur or other creature. Basically one single "thing" represented by a figurine.

## Abbreviations

The following abbreviations are used throughout the rules:

IP = Improvement Points  
ND = Neodollars  
MV = Movement  
AR = Armor  
RMC = Ranged Miss Chance  
MMC = Melee Miss Chance  
BRV = Bravery  
HP = Hitpoints  
PMV = Panic Movement  
DIS = Discipline

## Number Rounding

Unless specified otherwise, always round down.

*For example 18.7 becomes 18, or 7 divided by 2 is 3 instead of 3.5, etc.*

## Re-Rolls

If a Trait, ability, or situation allows a re-roll the second result must be used, even if it's worse than the original.

## Marker Tokens

*Placing tokens can be done as follows:*

The Moved and Acted tokens are placed on the Posse roster by the character's name.

The Reload token are placed on the Posse roster by the weapon's name.

The Fleeing, Panic, Stunned, Slowed, Stopped tokens are placed by the figurine on the table.

# THE TURN

---

*The passage of time during combat situations is tracked using turns. Each turn allows players to Activate their entities and perform various actions.*

1. Clear Tokens (Moved and Acted)
2. Roll Initiative
3. Activate Entity
  - A) Use any Active Traits
  - B) Perform Movement and Action Phase
4. Repeat #2 and #3 until no un-Activated entities remain

## Step 1 - Clear Tokens

Clear the Moved and Acted token markers from all entities at the start of each turn.

## Step 2 - Roll Initiative

Each player rolls a D12 (re-roll any ties). Whoever rolls highest has Initiative and will Activate an entity first, followed by the player with the second highest roll and so on.

Once every player has finished their Activation they will repeat this step until no un-Activated entities remain, at which point the turn is over.

**Uneven Entities:** If the count of un-Activated entities for each player is uneven (not a 1:1 ratio), the numerically superior player must Activate additional entities to compensate. Activate additional entities to match the ratio at the time of the Initiative roll.

*For example Jim has 6 entities and Sally only has 2 entities (3:1 ratio):*

*First Activation (Jim wins Initiative): Jim Activates 3 entities then Sally Activates 1 entity.*

*Second Activation (Sally wins Initiative): Now the count is 3 entities to 1, so still a 3:1 ratio. Sally Activates 1 entity then Jim Activates 3 entities.*

*Or if Jim has 5 entities and Sally has 3 (not a 1:1 ratio, but not quite a 2:1 ratio):*

*First Activation (Jim wins Initiative): Jim 1, Sally 1.*

*Second Activation (Jim wins Initiative): Now the count is 4 entities to 2, so a 2:1 ratio. Jim 2, Sally 1. Sally kills 1 of Jim's characters.*

*Third Activation (Sally wins Initiative): Since Jim lost an entity the count is now 1 entity to 1, so back to a standard 1:1 ratio. Sally 1, Jim 1.*

## Step 3 - Activating an Entity

*Activating is when an entity is roused and called to act, normally by moving and firing a weapon.*

An Activated entity starts their Activation by using their Active Trait(s), if desired. Then they perform the Movement and Action Phase, in any order.

**Skipping Phases:** One or both Phases can be skipped if desired (for example an entity doesn't have to perform their Maneuver Phase). If skipped they still count as having been Activated.

## MANEUVER PHASE

---

*During the Maneuver Phase an entity can move and position around the field of battle.*

### **Standard Move**

Move the entity any number of inches in any direction up to the entity's Movement statistic. Mark them with a Moved token.

***Facing:*** Entities can see and fire 180 degrees in front of them. Use the direction of the figurine's feet to decide which way is forward.

Facing can only be changed during the Maneuver Phase (at no cost), but once decided it remains the same until their next Activation.

***Maneuvering Through Entities:*** An entity can move through allied entities, but not through enemy entities.

***Difficult Terrain:*** Any terrain except flat plains is considered Difficult Terrain (trees, hills, cliffs, marsh, etc.).

Entities must double the cost of Movement while in Difficult Terrain.

*For example to move through a 6" wide forest (Difficult Terrain) a character would use 12" of Movement (6"x2). Alternatively a character would use 4" of Movement to climb a narrow slope 2" high (2"x2).*

***Falling Damage:*** If an entity falls they take 1 HP of damage for every 1" of height they fell.

*For example a character fighting on top of a 3" hill is hit by a Shudder Lance and the Knockback effect sends them backwards off the cliff. In addition to the attack they would take 3 HP of damage for the 3" fallen down the cliff.*

## ACTION PHASE

---

*During the Action Phase an entity can perform a single complex task, such as firing a gun or using an item.*

After performing an Action from the list below mark the entity with an Acted token.

### **Option 1 - Use a Weapon**

Perform an attack with either a ranged weapon or a melee weapon (see Combat section below).

### **Option 2 - Use an Item**

Apply an item from your inventory to yourself or an adjacent allied entity.

*For example a Medpack, Whiskey Drop, etc.*

### **Option 3 - Reload a Weapon**

A weapon the character has is reloaded. Clear the Reload token from that weapon.

### **Option 4 - Run**

Perform a Standard Move using half your Movement statistic (minimum of 1").

*For example an entity with MV 4 could Run an additional 2" for a total of 6" during their Activation, whereas an entity with a MV 3 could Run an additional 1" for a total of 4".*

### **Option 5 - Charge**

If an enemy is within 2-6" the entity can try to Charge. Measure the shortest straight line between the attacker and the target and roll a D6. Count the roll as inches.

If the roll as inches is enough to reach the target the Charge can be completed. Move the attacker into adjacent contact with the target and perform a Melee attack with the Charge bonus.

Otherwise the Charge cannot be completed. The attacker does not move and cannot do anything else this Action Phase.

### **Option 6 - Mount or Dismount**

A character can Mount an adjacent dinosaur, or Dismount an existing one (see Dinosaur section below).

---

# COMBAT

---

*Since the dawn of mankind there has been violence. The re-emergence of dinosaurs has done little to slow the carnage. In fact, if anything, it has accelerated the technology involved in weapons. Battles can be fought at a distance or in hand to hand.*

*This section will outline the rules for simulating fights between posses and the various people and creatures who wish them harm.*

## **Ranged Attack**

If the attacker can see the target (both Line of Sight and Facing should be checked) and are within the maximum Range of their weapon, they can attack in the Action Phase with the ranged weapon.

## **Melee Attack**

Two or more combatants are considered in melee combat (also know as close combat) if they are adjacent, regardless of Facing or elevation. They can attack in the Action Phase with a melee weapon.

---

## **GENERAL COMBAT PROCEDURE**

---

### **Step 1 - Attack Roll**

Roll a D12 for each Attack of the ranged or melee weapon. Include any bonus Attacks.

### **Step 2 - Determine Hits**

Use the Ranged Miss Chance for ranged weapons, and Melee Miss Chance for melee weapons. Apply any modifiers to the associated Miss Chance. Every Attack Roll greater than or equal to the modified Miss Chance is a Hit.

$\text{Attack Roll} \geq (\text{Miss Chance} + / - \text{modifiers}) = \text{Hit}$

**Automatic Hit and Miss:** An Attack Roll of 12 is always a Hit, and a result of 1 is always a miss, both regardless of Miss Chance and modifiers.

### **Step 3 - Apply Damage**

Add the count of all Hits to the weapon Damage. Apply any modifiers to the total. Subtract this number from the target Hitpoints.

$\text{Hitpoints} - (\text{count of Hits} + \text{weapon Damage} + / - \text{modifiers})$

**Critical Hit:** Every unmodified Attack Roll of 12 is a Critical Hit and counts as 2 Hits, unless a 12+ was needed to hit.

**Surprise Hit:** Any ranged attack against the target's back (180 degree arc opposite their front Facing) will be treated as a Critical Hit on 10+. This does not apply to target's in melee.

**Taken Out of Action:** If an entity is reduced to 0 or less Hitpoints they are Taken Out of Action. Immediately remove them from the game.

## Modifiers

The ability for an attacker to hit their target can vary depending on various conditions which are represented by modifiers. See the table below for when and how they apply:

Name	Type	Affects	Amount	When
<i>Armor</i>	All	Miss Chance	+Armor	Always
<i>Movement</i>	Ranged	Miss Chance	+1	Target moved
<i>Short Range</i>	Ranged	Miss Chance	-1	Target at Short Range
<i>Long Range</i>	Ranged	Miss Chance	+1	Target at Long Range
<i>In Melee</i>	Ranged	Miss Chance	+1	Target in Melee
<i>Cover</i>	Ranged	Damage	-1	Target in Cover
<i>Elevation</i>	All	Damage	+1	Attacker 2"+ above target
<i>Crossfire</i>	Ranged	Attack	+2	Target in Crossfire
<i>Charge</i>	Melee	Attack	+1	Attacker performed Charge

## RANGED COMBAT SPECIAL CASES

### Line of Sight

Ranged attacks can only be made against targets the attacker can see. Targets behind solid buildings, tall hills, etc. cannot be seen.

### Firing Arc

Entities can see and perform ranged attacks 180 degrees in front of them.

### Range

Weapons can have a Short, Medium, and Long range. A bonus is provided for attacks made at Short range, no difference for Medium range, and a penalty for Long range.

Measure the distance between the attacker and target and apply the corresponding modifier.

**Minimum Range:** A weapon has a Minimum Range if the starting range number is higher than 1. No attack can be made at targets closer than the Minimum Range.

*For example a Lever-Action Rifle (4-14" Medium range) could not attack at a distance of 1-3".*

### Cover

A target is in cover if they are behind an obstruction (tree, hill, other model, etc.) that partially obscures them. Apply the "Cover" penalty in this case.

### Elevation

If the attacker is 2" or more higher than the target (such as on a building rooftop or hill) apply the "Elevation" bonus.

## Crossfire

To check if a target is in a Crossfire measure a straight line between the attacker, the target, and an allied character. If both attackers have ranged weapons (that are in range) and none of the entities involved are In Melee then the target is in a Crossfire and each attacker can apply the "Crossfire" bonus.

## Reloading

Each ranged weapon has a Reload value as part of their statistics, such as 2x1 or 3x1. This number represents how likely and often the weapon will jam, overheat, or need to be reloaded.

If the count of unmodified Attack Roll dice that rolled 1 are greater than or equal to the Reload value, the weapon needs to be reloaded and cannot fire until a "Reload a Weapon" action is performed. Mark the weapon with a Reload token.

*For example firing a High Burst Rifle (6 Attacks, 3x1 Reload) with rolls of 1, 1, 1, 4, 6, 9. Because there are three unmodified 1s and the Reload value is 3x1, the weapon requires a reload.*

**Special Reload Values:** If the Reload value is "Auto" the weapon must be reloaded after each attack, whereas "None" means you never have to reload.

## MELEE COMBAT SPECIAL CASES

### Firing in (or into) Melee Combat

Apply the "In Melee" penalty to ranged attacks made in melee combat or when firing into an existing melee combat. This replaces the Short Range modifier, where applicable.

### Charge

If the attacker performed a Charge (see above) to enter melee combat with the target apply the "Charge" bonus to the first set of attacks.

### Snap Attack

If a target voluntarily Dismounts or moves during melee combat (including to leave the melee), any opponents with a melee weapon can choose to perform a free Melee Attack against them. This does not apply to mandatory movement due to Fleeing, Knockback, Pulled, etc.

## COMBAT EXAMPLES

### Basic Ranged Example

*Firing a 200KW Six-Shooter (4 Attacks, 2 Damage) with 7 Ranged Miss Chance. The target has no Armor, is at Medium Range, and is not in Cover, so no modifiers are needed.*

**Step 1:** Roll 4D12 (because of 4 Attacks) resulting in 2, 6, 9, 12.

**Step 2:** Need a 7+ to hit (because of 7 Ranged Miss Chance with no modifiers). So the rolls of 9 and 12 hit. A 12 is a Critical Hit so it counts as a double hit. In total there are 3 hits.

**Step 3:** Add base Damage of the weapon (2) to the total hits (3) for 5 total damage. Reduce the target's Hitpoints by 5.

### Complex Ranged Example

*Firing a Pump Shotgun (3 Attacks, 5 Damage) with 4 Ranged Miss Chance. The target has 2 Armor and is at Short Range in Cover behind a tree. The total Miss Chance needed is 5 (4 base + 2 Armor - 1 Short Range).*

**Step 1:** Roll 3D12 (because of 3 Attacks) resulting in 5, 7, 10.

**Step 2:** Need a 5+ to hit, so all rolls hit. In total there are 3 hits.

**Step 3:** Unmodified total damage is 8 (3 hits + 5 base Damage). Target is in Cover, so modify the damage by -1, for a total of 7. Reduce the target's Hitpoints by 7.

### Basic Melee Example

*Using a melee Long Sword (2 Attacks, 4 Damage) with 8 Melee Miss Chance. The target has no Armor.*

**Step 1:** Roll 2D12 (because of 2 Attacks) resulting in 5 and 11.

**Step 2:** Need an 8+ to hit (because of 8 Melee Miss Chance). So the roll of 11 hit.

**Step 3:** Add base Damage of the weapon (4) to the total hits (1) for 5 total damage. Reduce the target's Hitpoints by 5.

### Complex Melee Example

*Charge with a melee Spear (4 Attacks, 3 Damage) with 5 Melee Miss Chance. The target has 3 Armor. The total Miss Chance needed is 8 (5 base + 3 Armor).*

**Step 1:** Roll 5D12 (4 base Attacks, plus 1 for Charge Bonus) resulting in 1, 3, 8, 9, 11.

**Step 2:** Need an 8+ to hit. So the rolls of 8, 9 and 11 hit.

**Step 3:** Add base Damage of the weapon (3) to the total hits (3) for 6 total damage. Reduce the target's Hitpoints by 6.

# BRAVERY TEST

*Bravery Tests represent a character trying to maintain their will to stand and fight against tremendous and terrifying odds or situations. Failure represents running away like a coward or shaking in their boots.*

*This section will explain how and when to take Bravery Tests, and the consequences of failing them.*

## When to Bravery Test

If a character suffers damage greater than or equal to half their starting Hitpoints value (minimum 2) from a single ranged or melee attack, a Bravery Test is immediately required.

*For example a character had 10 starting Hitpoints. They suffer 7 damage from a Bolt Action Rifle. The damage is higher than 5 (half their starting Hitpoints) and therefore they must perform a Bravery Test.*

Damage  $\geq$  (starting Hitpoints / 2) = Bravery Test

## How to Bravery Test

Roll a D12 for the Bravery Test. If the result is greater than or equal to the character's Bravery statistic, they have failed the Bravery Test and are Fleeing.

Mark them with a Fleeing token.

D12  $\geq$  Bravery statistic = failed

## Effect of Fleeing

When the Fleeing character is next Activated they must automatically Standard Move in a straight line directly away from the nearest enemy. After this remove the Fleeing token, adjust Facing as desired, and perform their Action Phase normally.

If the Fleeing character is mounted on a dinosaur, they stay mounted and act as above except they move using the dinosaur's Movement statistic.

*For example a character with MV 4 fails a Bravery Test and is marked Fleeing while riding a Longneck dinosaur (MV 5). When they are next Activated the mounted character and dinosaur must Flee from the nearest enemy using the Longneck's Movement of 5".*

**Impossible to Flee:** If Fleeing would move the character off the table, into an enemy entity or any other situation where Fleeing is impossible (such as Stopped), they are Stunned instead and cannot perform an Action Phase. If possible the character can still perform a Maneuver Phase.

## Multiple Bravery Tests

If a character is already Fleeing, ignore any subsequent Bravery Tests until their Fleeing token has been removed.

## Dinosaurs and Bravery Tests

Dinosaurs do not ever take Bravery Tests. Instead use Discipline under the Dinosaur section below.

## CREATING A POSSE

---

*A Posse is a group or gang of up to five characters and one dinosaur who travel across the wild plains and steaming jungles battling feral beasts and foes of all kinds.*

*This section will familiarize you with the process of filling out a Posse Roster (a blank copy is available at the end of this rulebook).*

### Step 1 - Choose Posse Name

Choose a Name for the Posse, and write it in the empty space at the top of the roster.

### Step 2 - Posse Starting Statistics

*All Posses start with the following group statistics. Fill in each associated field at the top of the roster.*

**IP Current:** 100 (remaining Improvement Points)

**IP Total:** 100 (total available Improvement Points)

**ND Current:** \$1,000 (remaining Neodollars)

**ND Total:** \$1,000 (total available Neodollars)

### Step 3 - Recruitment

*See the section below for detailed information on creating a character and dinosaur.*

**Posse Composition:** Each Posse must start with 3 entities. There must be 1 Leader, 1-4 Members, and up to 1 Dinosaur.

*For example a Posse could start with 1 Leader, 1 Member, and 1 Dinosaur. Or 1 Leader and 2 Members and no Dinosaur.*

**Recruitment Costs:** *Hiring or recruiting help is costly but worthwhile. Initial recruitment during Posse creation is less expensive than trying to hire members later.*

- The Leader is always free to recruit.
- The first Member is free to recruit.
  - Each additional Member costs \$200 initially, or \$250 later.
- Dinosaur prices vary from \$300 to \$1,000.

**How to Make a Dinosaur:** Complete the Recruiting a Dinosaur section below.

**How to Make a Member:** Complete the Creating a Character section below.

**How to Make a Leader:** As a Member, but grant the following benefits for being the Leader:

Benefits: +2 HP, +1 BRV, Yeehaw! ability

#### Yeehaw! (Ability)

*This inspiring Leader ability has two effects:*

1. One other entity within 12" can re-roll a single dice once per encounter. Mark the ability as used on the Posse Roster.
2. If the Leader is Taken Out of Action every allied human must make a Bravery Test.

#### **Step 4 - Advance Characters**

Each Posse can use their Improvement Points amongst their characters in any manner they choose.

Not all of the points have to be used; any leftover points should be recorded in the "IP Current" field at the top of the roster.

Dinosaurs cannot use Improvement Points.

**Spending Improvement Points:** *Changing statistics from their base value (either increasing or decreasing) is done using an easy to understand sliding scale that is built around the default value of each statistic. See the tables below to find the cost (in Improvement Points) to modify a statistic.*

The cost is for each "step" of improvement.

*For example raising Movement from 4 to 5 would cost 12 Improvement Points, and an additional 14 points for 5 to 6 (for a total of 26 points if someone improved directly from 4 to 6).*

**Voluntary Weakness:** Some statistics can be voluntarily weakened to gain additional Improvement Points that can be spent somewhere else. This is noted as "+X" in the tables.

*For example voluntarily decreasing Movement from 4 to 3 would net 5 Improvement Points, similarly reducing Bravery from 6 to 5 would give 2 Improvement Points.*

#### **Step 5 - Allocate Traits**

Each Posse begins with 3 Traits to choose and allocate to any entity or set of entities (Leader, Members, or Dinosaur). See the Traits section below for details.

*For example one character might get one Active Trait, another gets one Passive Traits and their dinosaur chooses an Active Trait. Or one character could be greedy and take two Active Traits and one Passive Trait.*

**Step 6 - Equip the Posse**

Spend any remaining Neodollars on weapons, armor, and equipment for any characters in the Posse. Record leftover money in the "ND Current" field at the top of the roster.

**Step 7 - Fill in Remaining Fields**

The Posse Roster should now be populated with details of your entities, but double check it to ensure no unnecessary blank fields remain.

## STATISTIC IMPROVEMENT COSTS

### IP Cost - Movement

*How fast the character can move around the field of battle.*

Movement Improvement Costs																	
1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18
+7	+6	+5	10	12	15	18	21	24	27	30	33	36	39	42	45	48	51

### IP Cost - Armor

*Modifies attacker's chance of hitting the character, and can be further improved by wearing Armor*

Armor Improvement Costs
Can be raised from 0 to 1 for 10

### IP Cost - Ranged Miss Chance

*Used to determine if ranged attacks hit.*

Ranged Miss Chance Improvement Costs											
1	2	3	4	5	6	7	8	9	10	11	12
-	-	49	33	22	15	10	10	8	6	4	-

### IP Cost - Melee Miss Chance

*Used to determine if melee attacks hit.*

Melee Miss Chance Improvement Costs											
1	2	3	4	5	6	7	8	9	10	11	12
-	-	49	33	22	15	10	10	8	6	4	-

### IP Cost - Bravery

*Used during Bravery Tests to determine if a character flees.*

Bravery Improvement Costs											
1	2	3	4	5	6	7	8	9	10	11	12
-	+5	+4	+3	+2	6	6	8	10	12	-	-

### IP Cost - Hitpoints

*Represents how much damage a character can sustain before being Taken Out of Action. Also affects when a Bravery Test is required.*

Hitpoints Improvement Costs
Can be increased by 1 HP for 6
Can be decreased by 1 HP for +4

## ADVANCING A POSSE

---

*As a Posse defeats enemies and completes daring jobs they will advance from a weakling gang to a pack of hardened veterans. This progress is tracked and represented by gaining more Improvement Points and better equipment.*

### **Gaining Money and Power**

*Normally taking out enemies will help a Posse improve, but other beneficial situations exist.*

- For every enemy entity Taken Out of Action the Posse gains 3 Improvement Points and \$30.
- For every 30 Improvement Points gained the Posse can select 1 additional Trait.
- If the Posse wins or succeeds at an encounter award an additional \$30.

**Recording Gains:** For ease of tracking, any additional IP, ND, or Traits are recorded after each encounter, instead of immediately as they happen.

### **Maximum Improvement Points**

The highest achievable IP Total for a Posse is 400.

*By this point the characters in your Posse have learned almost everything they need to survive comfortably in the world.*

## CREATING A CHARACTER

---

*Each person in a Posse plays an important role in the continued survival and advancement of the group. Some may be long ranged specialists, melee bruisers, supporting doctors, or any other role their statistics and personality helps define.*

*This section is used to create a custom character that can be hired as part of a Posse, and is used to fill in each character block of the Posse Roster.*

### **Step 1 - Choose Character Name**

*Even though the year is 2285, names common in the 21st century are still valid and not unusual.*

*Choose a Name for the character, and write it in the space marked "Name".*

### **Step 2 - Choose Allegiance**

*Choose an Allegiance for the character from the available four detailed below. Apply any modifiers to the default base values for each statistic, and remember to calculate improvement costs using the modified statistic.*

*When marking the Allegiance on the Posse Roster, circle the corresponding letter in the box to the left of the "Name" field (for example "D" for Duster).*

*Characters in a Posse can be different Allegiances.*

#### ***Duster***

*Dusters scrape a living out of the desert in shanty towns and fields. Although a little slow on their feet, they are rough and tough from a physically demanding life.*

Effect: -1 MV, +2 HP

#### ***Neotechnoist***

*Neotechnoists hail from the jungle surrounding the volcano. Although somewhat unaccustomed to hardship, they have had many opportunities to access and study technology and modern weapons.*

Effect: -1 RMC, -2 HP, \$10 Wealth Refund from first weapon purchase

#### ***Savage***

*Savages live wild and feral in the wastelands away from civilization and sometimes band together in tribes to hunt a powerful dinosaur. Although unfamiliar with modern weapons, they are lightning fast from surviving on the edges of society.*

Effect: +1 MV, +1 RMC

#### ***Bandit***

*Bandits come from all walks of life, and can be just trying to survive anyway they can or downright morally bankrupt. They are survivors, tinkers, and jack-of-all-trades, and therefore have no glaring strengths or weaknesses.*

Effect: None

### Step 3 - Starting Statistics

There are 6 statistics for each character, described below. These represent how useful or skilled a character is in certain situations, and will vary between characters within a Posse.

Fill in the default base values for each statistic in the provided field on the Posse Roster. These statistics can be improved by spending Improvement Points.

Statistic	Abbreviation	Desired	Default Base	Minimum	Maximum
<i>Movement</i>	Move, MV	Higher	4	1	12
<i>Armor</i>	AR	Higher	0	0	8
<i>Ranged Miss Chance</i>	RMC	Lower	8	3	12
<i>Melee Miss Chance</i>	MMC	Lower	8	3	12
<i>Bravery</i>	BRV	Higher	6	2	10
<i>Hitpoints</i>	HP	Higher	8	1	40

## CREATING A CHARACTER EXAMPLE

*This example will demonstrate the process to create a character. Included is choosing and applying the Allegiance, improving statistics, selecting a Trait, and buying equipment.*

**Name:** We name our character "Quidel", and he'll be the Leader of our new Posse. Since he's a Leader he automatically gets +2 HP and +1 BRV, which means his starting statistics are:

MV 4, AR 0, RMC 8, MMC 8, BRV 7 (6+1), HP 10 (8+2)

**Allegiance:** Quidel grew up in Nevada and only knows the hardship of life outside The Wall. Therefore his Allegiance will be Duster. This means he has an additional +2 HP, but -1 MV. His statistics are now:

MV 3 (4-1), AR 0, RMC 8, MMC 8, BRV 7, HP 12 (10+2)

**Statistics:** The plan for Quidel is to advance across the field firing his ranged weapons before closing into melee. Therefore he'll be passably trained in shooting and close combat without being overly specialized in either.

The first statistic to improve is Ranged Miss Chance. We're improving from 8 to 7, which costs 10 IP (as shown in the table above).

Increasing his Melee Miss Chance from 8 to 7 is a similar cost of 10 IP. His statistics are now:

MV 3, AR 0, RMC 7 (8-1), MMC 7 (8-1), BRV 7, HP 12

Since he's our Leader some additional survivability would help. To this end we purchase +3 HP. At 6 IP per +1 HP, we've spent an additional 18 IP. We'll also give him a base Armor of 1 for 10 IP. His final statistics are:

MV 3, AR 1 (0+1), RMC 7, MMC 7, BRV 7, HP 15 (12+3)

**Traits:** Let's decide to allocate a Trait to Quidel. In this case we'll choose "Berskerer", a solid Active Trait option that gives +2 Melee Attacks once per encounter.

**Equipment:** Finally we need to equip Quidel. A basic gun will do to start, so we check out the Ranged Energy Weapons list and decide on the 80KW Six Shooter (4A-0D) for \$10. It's cheap and relatively effective.

However Quidel deserves a better melee weapon, so \$60 is spent on a Spear (4A-3D).

To maintain the survivability theme we'll buy him a suit of Cloth Armor (AR 1) for \$50, which increases his total AR to 2.

Finally we'll give him a Small IRP for \$10, which can be used to heal himself or an ally.

*In total we spent 48 IP and \$130 to create this character:*

Quidel - Duster Leader

MV 3, AR 2, RMC 7, MMC 7, BRV 7, HP 15, Berserker I

80KW Six-Shooter, Spear, Cloth Armor, Small IRP

# DINOSAURS

There are hundreds of dinosaurs to choose as mounts, allies, or beasts of burden. Having a loyal and steadfast companion dinosaur grants many important bonuses to a Posse. Each dinosaur is unique and has certain strengths and weaknesses that will be evident after researching the various statistics and a few battles involving them.

Note that the dinosaur list is not supposed to be comprehensive, scientifically accurate, or representative of which dinosaurs flourished together. Instead popular (and often misunderstood) archetypes are focused on.

## Types of Dinosaurs

Although there are numerous types of dinosaurs, they can be broken down into the general categories below:

Type	Size	Diet	MV	PMV	AR	MMC	DIS	HP	A-D	Cost	Specific Examples
Runner	S	H	10	D10	0	8	4	10	2-2	\$300	Elaphrosaurus, Ornithomimus, Struthiomimus
Ducky	M	H	6	D6	0	7	3	18	2-2	\$300	Edmontosaurus, Hadrosaurus, Parasaurolophus, Prosaurolophus
Ripper	S	C	7	D8	0	7	5	12	1-4	\$300	Coelurus, Dromaeosaurus, Ingenia, Saurornithoides
Fin	M	H	5	D6	2	7	6	16	3-2	\$400	Dimetrodon
Raptor	M	C	6	D6	1	6	6	16	1-6	\$400	Deinonychus, Troodon, Utahraptor, Velociraptor
Plated	L	H	4	D4	3	7	6	23	3-3	\$500	Kentrosaurus, Lexovisaurus, Stegosaurus, Wuerhosaurus
Armored	L	H	3	D4	4	7	5	20	3-3	\$500	Ankylosaurus, Euoplocephalus, Nodosaurus, Polacanthus
Thickskull	S	H	8	D8	1	6	6	21	5-1	\$500	Pachycephalosaurus, Prenocephale, Stygimoloch
Terror	L	C	5	D6	2	5	7	20	1-7	\$500	Allosaurus, Carnotaurus, Ceratosaurus
Horned	L	H	6	D6	2	6	8	26	4-3	\$700	Monoclonius, Pachyrhinosaurus, Torosaurus, Triceratops
King	L	C	6	D6	2	4	9	22	1-9	\$700	Albertosaurus, Tarbosaurus, Tyrannosaurus
Longneck	XL	H	5	D6	2	5	10	37	10-1	\$1,000	Barosaurus, Brachiosaurus, Diplodocus, Supersaurus
Titan	XL	C	4	D4	2	4	10	32	1-15	\$1,000	Carcharodontosaurus, Giganotosaurus, Spinosaurus

## RECRUITING A DINOSAUR

### Step 1 - Choose Dinosaur Type and Name

Choose the type of Dinosaur to be recruited from the list above. Pay the Neodollar amount listed under Cost to purchase them.

Fill in the Dinosaur Name, Type, Size, and statistics fields on the Posse Roster.

### Step 2 - Choose Breed

Choose a Breed for the dinosaur (similar to Allegiance for a human) from the available four detailed below. Apply any modifiers to the default base values for each statistic.

When marking the Breed on the Posse Roster, circle the corresponding letter in the box to the left of the Dinosaur Name field (for example "T" for Trained).

### **Trained**

*Trained dinosaurs are born in captivity or raised in a human environment soon after birth and make ideal companions. They are disciplined mounts well versed in accepting a rider and carrying them safely through battle. However they are slightly gentler after having their primal instincts suppressed.*

Effect: +1 DIS, -2 HP

### **Untrained**

*Untrained dinosaurs have some exposure to humans but not enough to be fully broken into a saddle and harness. The majority of dinosaurs are this type of breed, and such an upbringing has no positive or negative effect on their performance.*

Effect: None

### **Feral**

*Feral dinosaurs are wild and free and hunt through the jungles and deserts of the world. They tend to be tougher and less disciplined and think more with their stomachs than brains.*

Effect: -1 DIS, +2 HP

### **Plains**

*Plains dinosaurs roam across the flat scrub land, desert, and dust bowls outside the volcanic jungle. As a result they are exceptionally fast and agile, but are less competent with their claws because of their tendency to outrun foes instead of fighting them.*

Effect: +1 MV, +1 MMC

### **Advancing**

Dinosaurs cannot be modified using Improvement Points, but they can take Traits (although some might not be applicable or useful to them).

The only customization available for dinosaurs is through an advancement program that can be purchased. This is used to increase the dinosaur's Hitpoints using the formula below:

Dinosaur Hitpoints Advancement Costs
+1 HP for \$50, max +10

*For example a Posse might want a Raptor Dinosaur (base 16 HP) upgraded to 19 HP for \$550 (base price is \$400 plus \$150 for 3 HP at \$50 per +1 HP).*

### **Replacing a Dinosaur**

A dinosaur will refund half its original Neodollar cost when replaced or removed from a posse.

---

## SADDLE UP

---

### Number of Passengers

Dinosaurs can carry 1 human passenger for every Size category they are. So 1 passenger for Small dinosaurs, 2 for Medium, 3 for Large, and 4 for Extra-Large.

### Mounting

If there is unoccupied space on a dinosaur, a character can Mount and ride the dinosaur.

To do this they perform a Standard Move to be adjacent with the dinosaur. Then the character can use an Action Phase to Mount the dinosaur.

Characters can optionally start any encounter mounted.

### Dismounting

When a dinosaur is Activated any passengers can Dismount during the shared Action Phase, which uses the entire phase. Place the Dismounted character(s) anywhere adjacent to the dinosaur.

Once Dismounted the dinosaur and character(s) can still perform their Maneuver Phase, if they haven't already.

**Dismounting in Melee:** Dismounting provides a Snap Attack to any enemies in melee. Note that further movement once dismounted still provides a Snap Attack.

---

## MOUNTED COMBAT

---

### Activating a Mount

The dinosaur and any passengers Activate as one entity.

A single Maneuver Phase (using the dinosaur's Movement/Panic Movement statistic) is shared between the dinosaur and passengers, and either the dinosaur or one passenger can use a single Action Phase.

*For example a mounted Longneck dinosaur might Standard Move 5", then one rider might fire their ranged weapon. Or instead of firing maybe the dinosaur chooses to make a melee attack.*

### Attacking a Mount

Any ranged or melee attacks can target either the dinosaur or one of the passengers at no penalty.

### Mount Taken Out of Action

If a dinosaur is Taken Out of Action any passengers are placed (by the enemy) adjacent to where the dinosaur was downed.

### Lasso Attack

While mounted a character can use the special Lasso attack.

A basic Rope Lasso is always carried for free by all characters. More expensive or exotic Lassos can be purchased (see the Ranged Projectile Weapons list below).

## DISCIPLINE

*Discipline represents a dinosaur's ability to perform in combat while suffering pain, surprise, fear, and other trying emotions of battle. A higher Discipline means a dinosaur will be able to maintain a consistent pace and direction and obey any rider commands. A lower Discipline means the dinosaur is more likely to circle in panic or stumble around in fear.*

### How to use Discipline

If a dinosaur suffers damage greater than or equal to their Discipline value from a single ranged or melee attack they will panic.

Mark them with a Panic token. Multiple Panic tokens can be placed on each dinosaur.

*For example a Horned Dinosaur has a Discipline of 8. They are hit by a Gatling Gun for 10 damage and are therefore marked with a Panic token (as  $10 \geq 8$ ). Next they are hit by a Bundle of Dynamite for a further 8 damage and so another Panic token is added.*

### Effect of Panic

When marked with one or more Panic token dinosaurs must use their Panic Movement instead of Movement, as recorded on the Posse Roster.

*For example a Runner Dinosaur has a Movement statistic of 10 and a Panic Movement of D10. If they were marked with a Panic token they would have to roll D10 to decide how far they can Standard Move, instead of using the static 10 value.*

Note that a dinosaur with Panic tokens can still Run using their full Movement. Charging is also unaffected.

*For example a Horned Dinosaur has MV 6 and PMV D6. After receiving a Panic token and Activating they roll a 2 for their PMV, so they can only Standard Move 2". However they could still Run 3" from their MV 6 instead of 1" from the PMV 2, since the original Movement value is used.*

### Recovering from Panic

At the end of the dinosaur's Activation remove 1 Panic token.

If the dinosaur is Mounted remove an additional 1 Panic token.

*For example a King Dinosaur (with two passengers) has 3 Panic tokens at the start of the Turn. Eventually it Activates and rolls D6 for its Panic Movement with a result of 4. The King performs a 4" Standard Move and then a passenger fires. The King's Activation is now done, so 2 Panic tokens are removed (1 default with a bonus 1 removed because the King is mounted).*

# TRAITS

---

*Traits differentiate an entity by providing a unique way of hampering enemies or boosting their own abilities.*

*This section deals with acquiring and managing Traits and a list of all available Traits.*

## Maximum Traits

An entity can have a maximum of 3 Traits.

## Trait Categories

The two categories of Traits are Active (used to provide a temporary bonus during combat) and Passive (flat bonuses or "always on" abilities).

An entity may have any combination of Active and Passive Traits (for example one of each, or only three Active, etc.).

## Trait Stages

Stronger version of Traits can sometimes be acquired. These are named the same but have numerals after the name (for example "Strain Weapon II").

You must learn the previous stage of Trait before advancing to the next one.

Higher stage Active Traits are always used instead of their lower stage counterparts, while Passive Traits consecutively apply their effect at successive stages.

*For example you wouldn't use Thick Skin I and Thick Skin II; you would just have Thick Skin II. Whereas taking Bonus HP I, Bonus HP II, and Bonus HP III would combine in a resulting total of +9 Hitpoints from the +3 Hitpoints per stage.*

## Active Traits

*Active Traits provide a special temporary bonus or effect beyond what an entity could normally do.*

**Usage:** At the start of their Activation an entity can specify if they are using any Active Trait(s). Once used Active Traits last until the next Activation of the entity.

Each Active Trait can only be used once per encounter. Once used write a checkmark beside the Trait name on the Posse Roster to mark it as used.

## Passive Traits

*Passive Traits provide a bonus or benefit to the entity in the form of a permanent static modifier.*

**Usage:** When a Passive Trait is chosen, any bonus it confers is immediately applied to the entity (if possible) or always used in the required situation (for example "Charger").

## List of Traits

Below is a list of all Traits an entity can choose. Each trait has a Name, then all available Stages are listed. Finally a line of text explaining the effect of the Trait, with a "/" denoting any increased benefits at each stage.

# LIST OF TRAITS

Active		
Berserker	I, II	+2/+4 Melee Attacks
Clean Shot	I, II	+3/+5 Damage if target has full HP
Clever Shot	I	Ignore Cover penalties on attack
Back Shot	I, II	+3/+5 Damage if target is Fleeing
Crippling Shot	I	Slowed target on hit with Ranged weapon
Escape	I	Do not provide Snap Attacks to opponents
Eviscerate	I	-2 penalty to target's Bravery Test (if required)
Get Up!	I, II, III	Heal +5/+10/+15 HP to ally in 8"
Go For the Eyes	I	Critical Hit target on 10+
Grit	I	Re-roll a Bravery Test
Hamstring	I	Slowed target on hit with Melee weapon
Heroic Effort	I, II	+2/+4 Bravery
Inspiring Shot	I, II	+6/+9 HP to self if attack takes target out of action
Knee Shot	I, II	+3/+5 Damage if target already Moved
Knockback Shot	I, II	+2"/4" Knockback on hit
Lend a Hand	I	Transfer HP from self to ally in 8" at a 2:1 ratio
Lucky	I	Make enemy re-roll one set of Attacks against self
Neck Shot	I	+4 Damage if target is below half their starting HP
Onslaught	I	+2 extra Melee Attacks on Charge
Quick Hands	I	Use one item for free
Rally	I	Remove Fleeing token from self or ally in 8"
Ranger	I	Ignore all Difficult Terrain penalties
Rapid Fire	I, II	+2/+4 Ranged Attacks
Retreat!	I, II	+4/+6 Movement to ally in 8"
Rush	I, II	+4/+6 Movement, self Slowed next Turn
Shake it Off	I, II	Remove 1/2 negative effects (Stopped, etc.)
Skilled Shooter	I, II	-2/-4 Ranged Miss Chance
Skilled Stabber	I, II	-2/-4 Melee Miss Chance
Sniper Shot	I	Ignore Range penalties
Speed Reload	I	Reload one weapon for free
Sprint	I, II	+3/+5 Movement
Strain Weapon	I, II	+2/+4 Damage
Strong Rider	I	+3/+5 Armor if Mounted
Thick Skin	I, II	+2/+4 Armor
Tracking Shot	I	Ignore Movement modifier on attack
Try Again	I	Re-roll one set of Attacks
Turtle	I, II	+3/+5 Armor, self Stopped
Underdog Shot	I	+3/+5 Damage if target has more HP than self
Whirlwind	I	Attack two adjacent enemies in Melee
Passive		
Awareness	I	360 degree Facing and Firing Arc
Big Game Hunter	I, II	+1 Damage against Dinosaurs
Bonus MV	I, II, III	+1 Movement
Bonus RMC	I	-1 Ranged Miss Chance
Bonus MMC	I	-1 Melee Miss Chance
Bonus BRV	I, II, III	+1 Bravery
Bonus DIS	I	+1 Discipline
Bonus HP	I, II, III	+3 Hitpoints
Boxer	I, II	+2 Damage with Brawl attacks
Charger	I	+1 Movement when using the Charge action
Clear Sight	I, II, III	+1" to all ranges of any ranged weapon
Climber	I	Treat climbing (cliffs, hills) as normal terrain
Doctor	I	Heal 1.5x the item amount on someone else
Eagle Eye	I, II	+3" to Long range of any ranged weapon
Runner	I	+1 Movement when using the Run action
Independent	I	Ignore Bravery Test if Leader taken out of action
Thrower	I, II	+3" range with Grenade weapons
Wrangler	I, II	+2 Damage with Lasso attacks

# STANDALONE GAME

---

*Competing against an equally matched Posse in a one-off game is simple and fun to do. This section deals with the steps necessary to organize a standalone game of Dinosaur Cowboys.*

## **Step 1 - Decide on Details**

*All players need to agree on some details before the game can start.*

**Variant Rules:** Double check with your opponent(s) if they like to use any custom modifications or optional variations to the rules.

**Posse Quality:** Normally a Posse starts with 100 IP, 1,000 ND and 3 Traits, but higher values can be used as long as both Poses have the same.

Try to maintain a 1 IP to \$10 ratio to ensure equipment purchases match statistics.

Also try to grant 1 Trait per 30 IP so that special abilities match skills.

**Objective:** Decide on an objective for the game, whether it is a standard "kill everyone" match or capturing a point, protecting a location or person, escorting a caravan, assassinating a target, demolishing a building, etc.

**Table Size:** Agree upon a table size, normally 4 feet long and 3 feet wide is used. Larger tables hamper melee entities and reward shooting, while the reverse is true for smaller tables.

**Deployment Size:** Agree on how deployment should be done. For rectangular tables decide whether deployment will be done on the short or long table edges (normally short edges). Determine how far each Posse should be allowed to deploy inwards (normally 8") or how far apart the Poses start (normally 30-35").

## **Step 2 - Create a Posse**

Players should now create a Posse using the Improvement Points and Neodollar values decided in the step above. Fill in a blank Posse Roster with the result.

**Multiplayer Game:** For each additional player beyond 2 add +2 HP (at no cost) to every entity in your posse (for example +6 HP for a 5 player game).

## **Step 3 - Set Up Table**

Using the table size agreed upon in Step 1, take turns adding terrain features to match the current objective or location of the battle.

## **Step 4 - Set Up Poses**

Once the table is finished each player rolls a D12 (re-roll ties). Whoever rolls highest chooses the table edge to set up on and immediately deploys there, followed by the second highest roll and so on. Each player places their Posse within the space of the deployment size agreed upon in Step 1.

## **Step 5 - Start the Game**

Now the game can begin, so start the first Turn!

## CAMPAIGN GAME

*Linking battles and exploration into a continuing narrative is what separates a campaign from a standalone game. Exploring desert wastelands, vibrant jungles, sunken cities, and underground caves is an important part of a campaign. Posses may rapidly travel place to place or choose to slowly wander amidst their surroundings.*

*This section will deal with maps, travel options, encounters, towns and cities, and passing time.*

### Overland Map

*Battered by floods and rising temperatures, the United States of America circa 2285 looks different from the 21st century. What follows is a general map of the country, plus borders representing the Neotechnoist jungle and burning desert.*

For tracking Overland progress it is recommended that standard real world roadmaps be used and modified to match the Overland map shown below:

## A Day of Travel

*Travelling across the vast stretches of terrain that make up the future isn't as easy as it once was. Powerful land dinosaurs have replaced the automobile, and flying dinosaurs are used instead of airplanes.*

Every day a Posse can travel comfortably for 6 hours.

The rest of the time is spent scrounging for food and water, setting up camp, resting and sleeping, and exploring or resolving encounters.

**By Ground:** When travelling on the Overland Map an entity's Movement statistic is converted to Miles per Hour in a 1:1 to relationship. Use the lowest Movement in a Posse for this.

*For example, a character with a Movement of 4" could move 4mph for 6 hours per day for a total of 24 miles on the Overland map. If they were riding a Dinosaur with a Movement of 10" they would instead go 10mph or 60 miles per day on the Overland map.*

**By Air:** *The skittish flying dinosaurs of the Pterosauria clade ("Flappers") are sometimes raised and trained as transport carriers. Unable to stand the sound and violence of gunfights, the flying dinosaurs have never succeeded as combat mounts. Instead they are used to bear cargo and human passengers and provide the ideal of service of quickly moving city to city.*

Pay \$0.50 per mile for up to 400 miles per trip (rounded to the nearest mile or Neodollar).

The pilot and up to 6 passengers and all related gear can board a single flight. A dinosaur can take the place of 1 human passenger per Size category (Small would take 1, Medium 2, Large 3, Extra-Large 4).

**By Sea:** *Strapped with advanced airtight ferries, certain breeds of Nothosaurus ("Swimmers") have been trained to take passengers across rivers and lakes. No one has succeeded in crossing an ocean with such an improvised ship even though many attempts have been made.*

Pay \$1 per mile for up to 50 miles per trip.

The pilot and up to 20 passengers and all related gear can board a single ferry. A dinosaur can take the place of 1 human passenger per Size category (Small would take 1, Medium 2, Large 3, Extra-Large 4).

## Encounter Chance

*Exploring the world is not as safe or relaxing as it used to be. For every stretch of travel on the ground there is a chance of an encounter, either beneficial or harmful.*

The Sheriff should roll a D12 per day of travel By Ground and consult the table below:

Roll	Result
1-7	No Encounter
8-11	Enemy
12	Friend

If there is an encounter, the Sheriff should set up the terrain according to where the Posse is on the Overland map. Then they deploy suitable entities and start any combat.

## Healing and Recovery

After an encounter has concluded, all entities (even those Taken Out of Action) are restored to their original Hitpoints value, unless the Sheriff decides otherwise. This represents patching wounds, catching their breath, and resting after a battle.

In any other case, an entity recovers 2D12 Hitpoints per day or 4D12 Hitpoints if no vigorous action (travelling, combat, etc.) is done.

## Towns and Cities

Typically a Posse would stop at a town to fulfill a contract or job, acquire new work, restock supplies and rest, and basically escape the dangers of the wasteland for a while. Standard jobs can range from escorting caravans (either wooden wagons pulled by Horned or Thickskull dinosaurs, or loaded Longnecks) to assassinations, bounties, raiding villages and camps, hunting a troublesome local dinosaur, or anything else the Sheriff can think up.

## Timeline

The Day, Month, and Year are recorded and maintained by the Sheriff, with starting values and possible ranges of:

**Time:** Day or Night

**Day:** Current real world day, number 1-31

**Month:** Current real world month (for example December, January, etc.)

**Year:** 2285

## VARIANT RULES

---

*These optional rules can be used by players to give a different feel to certain situations in the game. All players have to agree ahead of time on which rules to use (if any). Most of these variants would have added too much complexity to the game or changed the overall flavor and so were left out of the core rules.*

### **Recommended Variant Rules**

The Variant Rules marked with an asterisk (\*) are recommended and considered the most balanced and flavorful.

\* **Initiative Choice:** Whoever wins Initiative can choose to Activate first or second, instead of automatically having to Activate first.

*This can add a surprising amount of slow down to the game since it involves another choice before characters can start moving and shooting, but at the same time going first isn't always desirable.*

\* **Last Man Standing:** The last surviving entity of a Posse does not have to take Bravery Tests (for characters) and is unaffected by Discipline (for dinosaurs).

*This is perfect for heroic last stands between a desperately outnumbered and decimated Posse.*

\* **Dual Wield:** Two identical Small melee or ranged weapons can be dual wielded, which gives a +1 Attack bonus.

*This is very useful and flavorful for giving Posses a reason to use some of the smaller weapons.*

**Armor Damage Reduction:** Instead of modifying Miss Chance, Armor directly reduces damage equal to the Armor Rating.

*This gives the game a very different feel. Attackers will hit much more regularly but for less damage, which can be frustrating to some players.*

**Miss Chance in Melee:** Instead of using RMC for ranged weapons in melee, use MMC instead. Still apply the "In Melee" penalty.

*This makes melee even deadlier for dedicated ranged fighters, which can help reward close combat Posses.*

**Fumble Hit:** Any unmodified rolls of 1 count as -1 Hit, to a minimum of 0 hits.

*This is basically the opposite of a Critical Hit and will make low rolls hurt even more.*

**Fast Target:** +1 additional Miss Chance against targets that moved a total of 10" or more in a single turn.

*This adds a bit of realism and also helps some of the smaller, faster dinosaurs survive.*

**Running Target:** +1 Miss Chance against targets that Ran.

*This will tend to favor dinosaurs and close combat fighters (who normally Run until they reach melee), but can add to their survivability.*

**Variable Run:** Instead of Run providing an additional 1/2 Movement statistic, roll a D6 as inches instead.

*This adds a random element which can be exciting, but some players prefer to have exact movement to help plan their turns.*

**Aimed Shot:** A character can steady their aim by skipping their Maneuver Phase to perform an Aimed Shot. Doing so applies a -1 Ranged Miss Chance bonus for that ranged attack.

*Useful for giving characters more options each turn. Can help against high AR targets and is slightly more realistic.*

**Placed Shot:** A character can try to hit a vital spot on a target by skipping their Maneuver Phase to perform a Placed Shot. Doing so means any attack roll of 10+ will be treated as a Critical Hit.

*This will make ranged snipers even deadlier, since they don't tend to move already.*

**Mount Protection:** Any riders add the dinosaurs AR to their own when attacked while Mounted.

*This will make riding a dinosaur very important, especially a Plated or Armored dinosaur. Could become very unbalanced when the rider already has a high AR, and will likely end with attackers hitting the dinosaur first.*

**Downed at 0 HP:** Instead of removing an entity when they reach 0 HP or less, place them face down instead. They cannot be Activated, take any actions, or be attacked, but an ally can heal Hitpoints (using a Medpack, Whiskey Drop, etc.) to restore the Downed entity.

*This can slow the game down a bit, but is slightly more realistic and can help add a teamwork aspect.*

**Yeehaw! Action:** Instead of allowing 1 re-roll in 12", this ability can provide one free Action Phase to any entity (even one who was already Activated) in 12".

*This will allow for some very cinematic moments where characters can perform superhuman feats, like shooting rapidly or pummeling a dinosaur in a single turn.*

**Purchasing IP:** 1 IP can be bought for \$10.

*This can improve variety in Posses because the creation of inexpensive, high quality characters becomes a possibility.*

## **Additional Ideas**

*Here are some other possible variants and improvements the players could extend and elaborate.*

- Can buy and set Traps like spiked pits, tripwires, etc. Deployed before battle and the X-Y coordinates (in inches) are marked down to keep them hidden from opponents.
- Some kind of "quick draw" with Six-Shooters that lets you roll off / duel an opponent within short range.
- Rapid firing gun that has variable D6 or D12 Attacks instead of a set number.
- Fire rules for Molotov cocktails (maybe an X" wide patch that lasts until the end of the turn?), get same attack if target enters or is pushed into it.
- Weather effects (sandstorm, acid rain, etc.) and hazardous terrain (lava, quicksand, etc.).
- Dinosaur equipment upgrades (armor plates, extra saddle, etc.).
- Weapon upgrades (laser sight, silencer, etc.) that grant additional benefits to the gun.
- Non-Dinosaur beasts (Sabertooth cats, Woolly Mammoths, etc.).

# WEAPONS AND ARMOR AND EQUIPMENT

---

## Neodollars

*The modern currency is called a "Neodollar", and uses the "\$" sign or "ND". Each bill is durable paper 8" long and 3" wide, and marked with a variety of vistas from the Neotechnoist jungle. Although printing is controlled by the Neotechnoists, money still escapes into the poorer wastelands outside The Wall.*

## Buying and Selling

Items are bought by a Posse from the tables below at the listed price.

Items that originally cost \$10 or over can be sold at 50% the listed price.

## Maximum Burden

*Because of the proliferation of dinosaurs, tracking of item weight is not done. Instead the only limitations are based on size.*

A character can carry a maximum of 2 Large weapons and 1 suit of Armor.

A dinosaur can store a maximum of 6 Large weapons and 3 suits of Armor.

Note that one item of a larger size category translates into two items of a smaller size category.

*For example 1 Large weapon translates into 2 Medium weapons, or 4 Small weapons.*

## Superior Weapons

*As a Posse explores they may come across superior versions of the standard weapons they are accustom to. These improvements are marked in the name of the weapon as follows:*

**Weapon +XA:** X is a number from 1 to 5, and specifies how many bonus Attacks the weapon grants.

**Weapon +XD:** X is a number from 1 to 5, and specifies how much bonus Damage the weapon does.

*For example a Pump Shotgun +1A would have 4 Attacks instead of 3, whereas a High Burst Rifle +3D would do 5 damage instead of 2.*

## Deficient Weapons

*Just as some weapons may be improved, others can be weakened from wear and tear. Looted or salvaged equipment tends to be deficient in some way. Below are some general guidelines for prefixes applicable to any weapon:*

**Rusty:** Lower Reload.

**Old:** Lower Range.

**Dented:** Lower Damage.

## WEAPON SPECIAL ABILITIES

---

*There is a preset list of common special abilities that are assigned to various weapons. The description and effect for each follows.*

**Both Barrels:** Add +2 Attacks for the next attack, but mark with a Reload token.

**Cover Breaker:** On hit remove 1 piece of vegetation based terrain (such as a tree or hedge). What constitutes a single piece is at the Sheriff's discretion.

**Explosion:** If hit, any entity (allied or enemy) within the listed inches suffers the base Damage of the weapon.

**Fan the Hammer:** Can only be used at Short Range or closer. Add +2 Attacks and 2" Knockback for the next attack, but mark with a Reload token.

**Fireline:** Draw a straight line from the firer in the direction they wish to attack, up to the maximum range of the weapon. Any entity (allied or enemy) the line passes over (even partially) suffers an attack from this weapon.

**Hail of Bullets:** Optionally re-roll one single Attack dice.

**Knockback:** If hit the target is pushed directly away from the attacker a distance equal to the listed inches.

**Lasso:** This weapon can only be used while mounted and can only target non-mounted characters.

**Pulled:** If hit the target is Pulled directly towards the attacker. This can unwillingly move a target into melee combat.

**Scoped:** Ignore the penalty for attacking targets in Cover.

**Seeking:** No Attack Roll is necessary, instead the target is automatically hit.

**Slowed:** On hit the target is Slowed and during their next Activation they can only move 1/2" their Movement statistic and cannot Run or Charge.

**Stopped:** On hit the target is Stopped in place and cannot perform a Maneuver Phase, Run, or Charge during their next Activation.

**Stunned:** On hit the target is Stunned and cannot perform an Action Phase during their next Activation.

## WEAPON TABLE INFORMATION

---

*Over seventy weapons are outlined in the item tables below. This list can be considered a template, as even a simple weapon like a Pump Shotgun can vary between areas in the country.*

*The statistic columns of the chart are outlined below, as well as detailed descriptive text for each weapon:*

**Name:** The common name or designation of the weapon.

**Cost:** The cost (in Neodollars) of the weapon.

**Attack:** The number of Attacks the weapon has.

**Damage:** The base Damage of the weapon. This value may be 0.

**Short:** The short range of the weapon, if any.

**Med:** The medium range of the weapon.

**Long:** The long range of the weapon, if any.

**Reload:** The reload, jam, or overheat chance of a weapon.

**Size:** The size of the weapon, either Small (S), Medium (M), or Large (L). Used for carrying capacity.

**Type:** The category of weapon, either Energy, Projectile, Grenade, Melee, or Brawl or Beast.

*Energy weapons are most likely laser based, especially if the Name has a Kilowatt (KW) or Megawatt (MW) rating in it. Otherwise it could also fire plasma or energized particles.*

*Projectile weapons are likely gunpowder based and similar to the weapons of the 21st century.*

*Grenade type weapons are manually thrown at an enemy, and will always have a Reload value of Auto. This represents grabbing another grenade from a bag or bandolier. Individual grenades are not counted or tracked, so think of each Grenade weapon as a collection or pack of weapons.*

*Melee weapons are used in close combat only and thus have no ranges or reload.*

*Beast type weapons are natural attacks of dinosaurs, such as trampling and goring. Beast attacks are always available to any dinosaur at no cost.*

*Brawl type weapons are natural weapons of humans, such as punches and kicks. Cannot be used while Mounted and cannot target dinosaurs or Mounted characters. Brawl attacks are always available to any character at no cost.*

**Special:** Any complex effects of the weapon. See the detailed list above for each ability.

## WEAPON DESCRIPTIONS

**DERRINGER**

**SIX-SHOOTER**

**HAND CANNON**

**LEVER-ACTION RIFLE**

**Six-Shooter:** By far the most common ranged weapon the ubiquitous six shot revolver has, on the surface, remained unchanged since the old wild west. However now in the place of solid lead bullets, incredibly high density batteries are used as ammunition. Each contain enough energy to generate a single laser blast of Kilowatt power, a level of drain that only battleship size cannons could propel earlier in the 21st century. These high tech revolvers are a daily reminder of the advancements in technology. A common style with this gun is "fanning" where the trigger is held and the hammer is manually loosed at a rapid pace. This is hard on the gun and only higher end models can handle the strain.

**Pistol:** Although these handguns have greater range and accuracy, they remain less used than the classic revolver as they tend to break down in dusty conditions, and don't fit in with the idealized cowboy image most of the population strive for.

**Derringer:** Small and easily concealed, this pocket pistol still packs a punch.

**Handcannon:** Drawing from a linked set of battery ammo allows these large bore handguns to fire wide, thick laser beams.

**Bow:** By drawing and enhancing the frictional energy created by pulling and releasing a bow string, these weapons allow the firer to propel laser beams.

**Shotgun:** These household weapons have been updated to fire clusters of burning plasma at a target. The reloading motion of the pump shotgun regenerates the plasma cells in preparation for another shot. The double barreled shotgun model has two independently charged barrels which can be fired separately or simultaneously. And finally the automatic shotgun which is powerful but tends to overheat quickly.

**Lever-Action Rifle:** Like the classic six-shooter, the lever-action rifle has been updated to 2285 standards. Each pull of the lever will reload a high charge battery in preparation for another shot. The larger batteries and longer barrel allow greater range and impact that revolvers, and can even achieve Megawatt levels.

**Twin Rifle:** This laser rifle has two vertically stacked barrels to increase firepower.

**Burst Rifle and Repeater:** By using smaller, lighter batteries the burst rifle (also called a repeater) trades penetrating power for a higher number of shots. Normally preferred by gunslingers who have poor accuracy for the sheer volume of laser beams fired in a wild spray.

**Rotary Rifle and Gatling Gun:** Updating the gatling gun design from the old wild west, this modern rotary rifle can achieve the highest rate of fire of any known weapon.

**Scoped Rifle:** Used by snipers and hunters, scoped rifles fire single condensed laser beams, relying on killing power over a barrage of shots.

**Stun Gun:** Discharging the equivalent of a lightning strike, this gun is perfect for slowing a target while they stagger and recover their wits.

**Bola:** An old style of weapon that binds two heavy weights between a stream of particles. When thrown it wraps around a target's legs and can cause them to stumble and slow as they hastily free their feet.

**Lasso:** The age old tradition of roping, lassoing, and wrangling a target to hold them in place is still used from the saddle of dinosaurs. Some exotic lassos can retract a victim closer or even slice at them with jagged barbs.

**Throwing Knife, Axe (Tomahawk), and Spear:** These crude weapons are normally chosen for style over functionality, as even the most basic six-shooter outperforms these bladed weapons.

**Stub Pistol:** Commonly designed like the projectile slinging guns of the 21st century, the expensive and carefully crafted solid bullets can inflict massive exit wounds compared to a laser beam from a comparable revolver.

**Musket:** A truly ancient weapon, this gun uses crude black powder to propel a lead ball a considerable distance, but with limited accuracy.

**Crossbow:** Firing jagged and barbed bolts, this simple but effective weapon is capable of catching an unwary enemy off guard.

**Sawed Off Shotgun:** With a shortened barrel this shotgun is used to spray a dense cloud of metal shrapnel or pellets at a target.

**Bolt Action Rifle:** This single shot rifle is sometimes preferred by rich hunters and parties of nobles for the loud report and bright muzzle flash.

**Assault Rifle:** Complete with wooden stocks and curved magazines, these fearsome weapons are great for spooking dinosaurs and raiders alike.

**Needler Rifle:** A specialized rifle loaded with advanced self guiding bullets, this weapon is normally reserved for targets with otherwise impenetrable defenses.

**Blunderbuss and Scattergun:** Firing a cloud of broken glass, rusty nails, rocks, and other shrapnel, the blunderbuss is a barbaric example of projectile weapons.

**Bazooka:** Comprised of a crude metal tube and heavy self propelled rockets, the bazooka is a crowd pleaser.

**10-Pound Cannon:** Very heavy cannon built from a solid steel frame. Normally muzzle loaded with standard round shot, chain shot, or grape shot.

**Rocket Launcher:** The addition of a magazine of smaller rockets allows this weapon to fire a few times before needing to be reloaded, while still maintaining a relatively destructive blast.

**Field Gun:** A light cannon that fires modern shaped charges using a massive amount of gunpowder. Fast breech loading allows a reasonable rate of fire.

**Grenade Launcher:** An elegant weapon that rapidly fires a stream of microgrenades at a target, with the benefit of showering the nearby area with razor sharp shrapnel.

**Flamethrower:** Uncommon and devastating, the flamethrower spews burning chemicals in a small arc around the user. Terrific at catching dinosaurs off guard, clearing bunkers, or starting an oversized campfire.

**Boom Grenades and Stick of Dynamite:** The most common grenade, this weapon comes in a variety of shapes and sizes. Most are simple cylinders thrown by hand, but some may be tins of explosives stuck atop wooden sticks.

**Kaboom Grenades and Bundle of Dynamite:** Similar to a boom grenade...just bigger.

**Riot Grenades:** These rubber tubes of stinging, compressed air blow opponents backwards upon explosion, and were used in some of the early food riots in Haven.

**Stun Grenades:** These grenades explode by thundering a low frequency pulse outwards, which momentarily incapacitates nerve endings.

**Tangle Grenades:** Exploding into a cloud of monowires these grenades quickly snare and tighten to lock a target in place.

**Glue Grenades:** Commonly used to slow charging dinosaurs, these grenades shower the target with a chemical mix of fast bonding glue.

**Defoliant Grenades:** An improved herbicide spray that can be used to clear a swathe of thick vegetation. These were used during the early exploration of the volcano jungle.

**Shank and Knife and Machete:** Crude stabbing weapons used to slash at targets and sever limbs.

**Brass Knuckles:** Heavy chunk of metal worn over the knuckles to increase the force of punches.

**Broken Bottle:** Normally not a weapon of choice, this improvised club of sharp glass can still get the job done...messily.

**Swords:** Ranging from the length of a hand to the size of a man, swords have been common since the early centuries of mankind. Aside from improving the materials used in construction, little has changed in the design since then.

**Motor Blade:** Powered by a small battery cell, this thick steel blade is covered in numerous spinning micro-drillbits which carve human and dinosaur flesh with equal ease.

**Spine Blade:** Masterfully crafted from ultradense rib bones of carnivorous dinosaurs makes this blade a durable and deadly option.

**Axe:** Savage and barbaric, the axe is a harsh reminder of a darker time in humanity's history.

**Staff:** An elegant wooden or steel rod, the staff can be deadly in skilled hands.

**Flail:** This weapon inflicts painful wounds through a heavy, spiked ball that is chained to a handle by a weave of incredibly durable micro-wire.

**Hammer:** Ranging from small one handed claw hammers to large headed sledgehammers, these weapons tend to cause enemies to flee in terror.

**Pickaxe:** Reminiscent of the days of gold prospectors, the pickaxe is sometimes used as a crude weapon.

**Club:** Simple and effective, this weapon ranges from a sturdy wooden plank to a crowbar.

**Spear and Pike:** Arguably one of mankind's first weapons, the spear and pike are perfect for harassing dinosaurs at a safe distance.

**Whip:** A modern version of the whip, this sparkling length of harnessed particles can tangle and trip a target.

**Dinoprod:** This steel rod is tipped with a powerful electrical discharge unit.

**Power Glove:** Powered by a small battery cell, this advanced metallic glove enhances the force of punches.

**Plasma Lance:** This weapon is a long steel lance that is sheathed in superheated energy.

**Twin Lance:** Although heavy and slightly unwieldy, this double pronged lance can be devastating in the right hands.

**Shudder Lance:** Vibrating several hundred times a second, this well known weapon uses stored kinetic energy to blast a target backwards.

## ARMOR TABLE INFORMATION

---

*A variety of armors are available for use by characters. These range from a simple cloth shirt to more advanced defensive materials necessary to withstand the fearsome blows of a dinosaur. Note that only the most common armors are listed, and other materials and types of armor may exist.*

*The statistic columns of the chart are outlined below, as well as detailed descriptive text for each suit of armor:*

**Material Name:** The main material component of the armor. The style and shape varies.

**Cost:** The cost (in Neodollars) of the armor.

**Armor Rating:** The level of protection and equivalent Armor Rating of each suit of armor.

**MV Penalty:** The amount of Movement a character loses when wearing a certain suit of armor. If this would reduce their Movement statistic to 0 or below then the character cannot wear the armor.

## ARMOR DESCRIPTIONS

---

**Cloth:** Thick cloth normally in a shirt or vest form. The material barely softens blows.

**Padded:** Layered or specially treated cloth to help further resist impact and burns.

**Quilted:** A painstaking approach of inlaying metal studs into common reinforced materials.

**Clay:** This armor is created by reinforcing superheated clay with soft layers of inner padding.

**Wood:** Crafted from hardy jungle trees, this suit of armor involves strapping carved and fitted pieces of wood to key locations, normally under other clothes.

**Bone:** Made up of a variety of dense bones, this armor is crude but effective at reducing the pain of a dinosaur bite.

**Dinohide:** Formed from a variety of tanned and treated dinosaur pelts, this suit is extremely common for its ease of customization.

**Mesh:** Created from links of durable metal or thick rubber, the mesh shirt is preferred by anyone with a flair for style, as it can seamlessly be worn under clothes.

**Flak:** A bulky vest useful in protecting the wearer from shrapnel and sharp teeth.

**Metal:** Heavy and cumbersome, a solid sheet of metal is still great at protecting vital areas while providing peace of mind.

**Ceramic:** Formed using modern mixing techniques, ceramic plating is useful for deflecting or absorbing weapon shots.

**Kevlar:** Uncommon and outdated by modern standards, 21st century kevlar is still sometimes found in law enforcement groups.

**Vectran:** An updated version of kevlar for 2285, a vectran vest can stop most shots with only minor discomfort to the wearer.

**Thermoplastic:** Worn outside clothes like a type of carapace, thermoplastic armor is useful against most energy weapons and blunt trauma.

**Biosteel:** Woven from thin, lightweight fibers harvested from giant jungle spiders, biosteel is a perfect choice for maintaining mobility.

**Kinetic:** Based on a recent breakthrough in the realm of personal protection, a kinetic shirt uses the energy of an incoming attack to reverse and deflect the blow.

**STF:** Developed near the end of the 21st century, shear thickening fluid (STF) was assumed lost after Eruption Day. However a group of explorers uncovered the secrets to its production several years ago. The magnificent liquid instantly hardens a nanosecond before an attack penetrates to flesh, providing maximum protection without sacrificing weight.

**Ferrobone:** Using rare ultradense bones reinforced with steel and interwoven with biosteel, a vest of ferrobone can make the wearer nearly impervious to pain.

## EQUIPMENT TABLE INFORMATION

---

*Various common and uncommon items can be used by characters to help in their adventures. Example equipment would be archaic items similar to their old west counterparts like sleeping bags, lanterns, and hemp rope, while the 2285 options are also listed like spymics, heartbeat scanners, cybergills, and more.*

*Only items that have a direct in game use are listed, but there are thousands of other minor items that characters are normally assumed to have on hand (like hats, boots, gloves, pins, belts, etc.).*

*The statistic columns of the chart are outlined below, as well as detailed descriptive text for each piece of equipment:*

**Name:** The name of the equipment.

**Cost:** The cost (in Neodollars) of a single item. This price may vary between locations.

**Purpose or Effects:** A summary of the rules governing how the item is used in game. See below for additional detailed rules for some items.

## EQUIPMENT DESCRIPTIONS

---

**Hemp Rope:** Sturdy rope woven from strands of hemp. Useful for climbing, towing or hauling, binding prisoners, etc. Normally comes in 50 foot lengths.

**Micro Rope:** A modern advancement that reduces the size and weight of rope to that of thin fishing wire, while still maintaining the load bearing characteristics. Not recommended for climbing as Micro Rope tends to cut through gloves. Normally comes in 200 foot lengths.

**Grappling Hook:** Thick steel hook with one to three prongs, used for latching onto cliff tops, trees, etc.

**Lockpick:** Traditional set of thin metal picks used for opening old fashion metal locks without damaging the lock itself.

**Locksplitter:** Container of nanorobots that are dumped into a lock and automatically form the resemblance of the key. Tends to damage the lock after use, but are quick and simple to utilize.

**Charcoal and Paper:** Simple implements for writing.

**Datapad:** Small solar powered screen used for writing.

**Deck of Cards:** Standard deck of playing cards used in gambling.

**Dice:** Standard pair of dice used in gambling.

**Musical Instrument:** Represents a wide variety of music making instruments like banjos, guitars, harmonicas, etc.

**Sleeping Bag:** Durable bed roll made from a variety of materials that can be compressed down to fit into a sack. Tested successfully to arctic temperatures.

**Fold-a-Cot:** Originally the size of a baseball bat, this revolutionary unfolding design expands into a metal cot raised two feet above the ground. Can fit a standard human being comfortably. Useful protection from critters on the ground.

**Tent:** Represents a variety of tents from simple one-man folding tents to larger group tents. Materials and method of construction vary.

**Canteen:** Represents any container that can hold liquid.

**Binoculars (Lense):** Traditional 20x magnifying lenses.

**Binoculars (Electric):** Modern electronic lenses that can magnify from 1x to 50x. Powered by long lasting batteries.

**Spymic:** Microphone used for amplifying distant sounds from up to 500 feet away. Useful for listening in on conversations.

**Candles (Wax):** A set of traditional wax candles.

**Candles (LED):** Glowing stick of light emitting diodes.

**Flinter and Tinder:** Crude method of starting a fire by striking flint and tinder together to create sparks.

**Matches (Chemical):** A box of wooden matches with specially treated chemical heads to instantly spark a flame when dragged over a rough surface.

**Firesparker:** Modern method of starting a fire by a self heating electric coil that is solar powered.

**Lantern (Oil):** Old fashioned light source useful for illuminating a wide, circular area.

**Lantern (Electric):** Modern light source that uses a cell of rechargeable batteries to create illumination in a wide, circular area.

**Flashlight:** Light source that casts a narrow, long beam of illumination. Powered by high density batteries.

**Fold-a-Shovel:** A microthin shovel that unfolds from a metal box the size of an egg.

**Wirecutter:** Self sharpening cutters that can be used to split barbwire, fences, etc.

**Motion Detector:** A small device ranging in style from a black sphere to a white box with a blinking light, the motion detector can be set up to trigger varying levels of alarm when motion is detected. Useful for preventing entry into certain areas, or securing a campsite at night.

**Heartbeat Scanner:** Displays beating hearts up to a 100 foot radius, even through walls and stone. Often used by bounty hunters to track down hiding prey. The scanner cannot differentiate between dinosaurs and humans.

**Filter Mask:** Varying in style from a nanofiber bandanna to a full face covering, the filter mask is useful for cleansing air of anything from dust to poison gas.

**Cybergills:** A collar that allows the wearer to breathe in fresh water for up to 3 hours before needing to recharge. Salt water tends to clog the Cybergill.

**Nightsight:** Representing a variety of light amplification devices ranging from goggles to eye contacts. Can be used to clearly see in low-light or totally dark conditions like underground, a room, or at night.

**Whiskey Drop:** The weakest healing agent, a Whiskey Drop doesn't actually contain any alcohol. Instead it mimics the dulling effects of whiskey through a complex mix of chemicals. Normally these healing items look like simple light brown pills. Restores 2 Hitpoints instantly.

**IRP:** Available in different sizes, the IRP (or Instant Regenerative Product) are packaged as thick needles filled with liquid that fuses broken bones, rapidly restores skin, and stimulates the creation of blood. Restores either 1D6 (Small), 1D12 (Medium), 2D12 (Large), or 40 (Critical) Hitpoints instantly (in the Action Phase it was used).

**Medpack:** A bag or package containing various items used in healing, such as bandages, tourniquets, disinfectants, etc. Restores 1D12 Hitpoints at the start of the target's next Activation.

**Autosurgeon:** Contraption that unfolds into a series of mechanical arms. The machine works rapidly to splint broken bones, fuse gashes, inject blood transfusions, and so on. Restores 2D12 Hitpoints at the start of the target's next Activation.

**Fold-a-Doc:** Similar to the Autosurgeon this unfolding doctor's bag is useful at repairing the most grievous of wounds. Restores 40 Hitpoints at the start of the target's next Activation.

## RANGED ENERGY WEAPONS

Name	Cost	Attack	Damage	Short	Med	Long	Reload	Size	Type	Special
80KW Six-Shooter	\$10	4	0	1-6	7-10	11-14	1x1	S	Energy	
100KW Six-Shooter	\$40	4	1	1-6	7-10	11-14	1x1	S	Energy	Fan the Hammer
200KW Six-Shooter	\$60	4	2	1-6	7-10	11-14	1x1	S	Energy	Fan the Hammer
300KW Six-Shooter	\$80	4	3	1-6	7-10	11-14	1x1	S	Energy	Fan the Hammer

## NATURAL WEAPONS

Name	Cost	Attack	Damage	Short	Med	Long	Reload	Size	Type	Special
Punch	N/A	2	1	Melee	Melee	Melee	None	-	Brawl	
Kick	N/A	1	2	Melee	Melee	Melee	None	-	Brawl	
Shove	N/A	1	0	Melee	Melee	Melee	None	-	Brawl	2" Knockback
Trip	N/A	1	0	Melee	Melee	Melee	None	-	Brawl	Stopped
Trample	N/A	2	0	Melee	Melee	Melee	None	-	Beast	4" Knockback
Gore	N/A	2	0	Melee	Melee	Melee	None	-	Beast	Slowed

## ARMOR

Material Name	Cost	Armor Rating	MV Penalty
Unarmored	N/A	0	0
Cloth / Padded / Quilted	\$50	1	0
Clay / Wood / Bone	\$150	2	0
Dinohide / Mesh / Flak	\$300	3	0
Metal / Ceramic / Kevlar	\$500	4	-1
Vectran / Thermoplastic	\$1,000	5	-2
Biosteel / Kinetic	\$1,500	6	-3
STF / Ferrobone	\$2,000	7	-4

Weapon Special Abilities
<b>Both Barrels:</b> Add +2 Attacks for the next attack, but mark with a Reload token.
<b>Cover Breaker:</b> On hit remove 1 piece of vegetation based terrain (such as a tree or hedge). What constitutes a single piece is at the GM's discretion.
<b>Explosion:</b> If hit, any entity (allied or enemy) within the listed inches suffers the base Damage of the weapon.
<b>Fan the Hammer:</b> Can only be used at Short Range or closer. Add +2 Attacks and 2" Knockback for the next attack, but mark with a Reload token.
<b>Fireline:</b> Draw a straight line from the firer in the direction they wish to attack, up to the maximum range of the weapon. Any entity (allied or enemy) the line passes over (even partially) suffers an attack from this weapon.
<b>Hail of Bullets:</b> Optionally Re-roll one single Attack dice.
<b>Knockback:</b> If hit the target is pushed directly away from the attacker a distance equal to the listed inches.
<b>Lasso:</b> This weapon can only be used while mounted and can only target non-mounted characters.
<b>Pulled:</b> If hit the target is Pulled directly towards the attacker. This can unwillingly move a target into melee combat.
<b>Scoped:</b> Ignore the penalty for attacking targets in Cover.
<b>Seeking:</b> No Attack Roll is necessary, instead the target is automatically hit.
<b>Slowed:</b> On hit the target is Slowed and during their next Activation they can only move 1/2" their Movement statistic and cannot Run or Charge.
<b>Stopped:</b> On hit the target is Stopped in place and cannot perform a Maneuver Phase, Run, or Charge during their next Activation.
<b>Stunned:</b> On hit the target is Stunned and cannot perform an Action Phase during their next Activation.

# EQUIPMENT

Name	Cost	Purpose or Effects
Hemp Rope	\$5	Thick sturdy rope, 50 feet long
Micro Rope	\$10	Nearly invisible rope, 200 feet long
Grappling Hook	\$1	To hook onto surfaces
Lockpick	\$10	For unlocking a lock without damaging it
Locksplitter	\$20	For destroying locks
Charcoal and Paper	\$1	For writing
Datapad	\$50	For storing notes
Deck of Cards	\$1	For gambling
Dice	\$1	For gambling
Musical Instrument	\$1	Make music
Sleeping Bag	\$5	Protection while sleeping on the ground
Fold-a-Cot	\$10	Raised platform to sleep on
Tent	\$20	Sleep in style
Canteen	\$1	Store liquids
Binoculars (Lense)	\$30	Magnify distant sights (20x)
Binoculars (Electric)	\$80	Magnify distant sights (1x-50x)
Spymic	\$50	Amplify and listen to distant sounds up to 500 feet away
Candles (Wax)	\$1	Small area of light
Candles (LED)	\$2	Small area of light
Flinter and Tinder	\$1	Start fires

Name	Cost	Purpose or Effects
Matches (Chemical)	\$2	Start fires
Firesparker	\$5	Start fires
Lantern (Oil)	\$1	Wide area of light
Lantern (Electric)	\$10	Wide area of light
Flashlight	\$10	Long narrow beam of light
Fold-a-Shovel	\$1	Dig holes
Wirecutter	\$1	Cut barbwire, fences, etc.
Motion Detector	\$70	Warn when motion is detected
Heartbeat Scanner	\$150	Determine location of entities within 100 feet
Filter Mask	\$80	Block harmful air
Cybergills	\$80	Breath underwater (in fresh water only) for 3 hours
Nightsight	\$80	See in low-light or dark conditions
Whiskey Drop	\$5	Restore 2 Hitpoints instantly
Small IRP	\$10	Restore 1D6 Hitpoints instantly
Medium IRP	\$20	Restore 1D12 Hitpoints instantly
Large IRP	\$50	Restore 2D12 Hitpoints instantly
Critical IRP	\$150	Restore 40 Hitpoints instantly
Medpack	\$15	Restore 1D12 Hitpoints over time
Autosurgeon	\$40	Restore 2D12 Hitpoints over time
Fold-a-Doc	\$120	Restore 40 Hitpoints over time

## Quick Reference Sheet

NAME	TYPE	AFFECTS	AMOUNT	WHEN
<i>Armor</i>	All	Miss Chance	+Armor	Always
<i>Movement</i>	Ranged	Miss Chance	+1	Target moved
<i>Short Range</i>	Ranged	Miss Chance	-1	Target at Short Range
<i>Long Range</i>	Ranged	Miss Chance	+1	Target at Long Range
<i>In Melee</i>	Ranged	Miss Chance	+1	Target in Melee
<i>Cover</i>	Ranged	Damage	-1	Target in Cover
<i>Elevation</i>	All	Damage	+1	Attacker 2"+ above target
<i>Crossfire</i>	Ranged	Attack	+2	Target in Crossfire
<i>Charge</i>	Melee	Attack	+1	Attacker performed Charge

TURN ORDER	ACTION PHASE OPTIONS
1. Clear Tokens (Moved and Acted)	- Use Weapon
2. Roll Initiative	- Use Item (on self or adjacent ally)
3. Activate Entity	- Reload a Weapon (remove Reload token)
3a. Use any Active Traits	- Run (additional 1/2 Move stat)
3b. Perform Phases (in either order)	- Charge (+D6" Move, bonus in Melee)
4. Repeat #2 and #3	- Mount or Dismount

BRAVERY TEST
- Required character test when Damage >= (starting HP / 2)
- Test by rolling 1D12 >= Bravery statistic = failed (Fleeing)

COMBAT PROCEDURE
<b>1. Attack Roll</b>
Roll one D12 for every Attack of the ranged or melee weapon
<b>2. Determine Hits</b>
1 Hit per Attack roll >= (Miss Chance +/- modifiers)
2 Hits (Critical Hit) per unmodified roll of 12
<b>3. Apply Damage to Target</b>
Subtract count of Hits + weapon Damage +/- modifiers from target HP

YEEHAW (ABILITY)
- One other entity within 12" can re-roll a single dice once per encounter. Mark the ability as used on the Posse Roster.
- If the Leader is Taken Out of Action every allied human must make a Bravery Test.
